EXPERIENCE

rBoomerange Commerce May 2022 – Present
Software Engineer *Bengaluru, KA*

- Worked as production on call support to handle all incoming issues in the system. Worked on Spark to generate how the clients sponsored banners were doing on retailers site.
- The development of the REM platform, a game-changing solution for achieving Omni-channel excellence. By enabling our company to transition from an Amazon-centric approach to a comprehensive Omni-channel platform, the REM platform significantly bolstered our market positioning and expanded our scope of services. I developed insight components from scratch in the platform.
- My primary focus lies in the development of Digital Shelf Automation (DSA), a cutting-edge system that empowers clients to assess the performance of their products based on critical retailer metrics such as Share of Voice (SOV) and Availability.

Quinbay Technologies Jan 2020 - May 2022
Software Engineer *Bengaluru, KA*

- Improved site loading time by adding lazy loading of multiple components within the page. Improved site loading time from 11s to 6s without hampering any existing functionality. Along with this, added memoization to reduce backend calls as well as faster loads on website.
- While developing those features, I follow good coding practice, writing unit test cases and optimizations are always taken into consideration. Due to my dedication and consistency of delivering quality tasks, I have been awarded with SPOT award twice in a span of only one year.
- Led a team of 4 people on developing a Content Management System for Team and business users. My role was to manage the team, decide who will work on which feature based on their skill set and also work on developing some crucial features for the same. We were the only team in entire organization at that time who has worked on Vue3 which was very new during that time.
- In Oct-2020, management at Coviam has decided to split the entities for smoother operations and management. So a new entity named as Quinbay was developed.

PROJECTS

Website to upload blogs | *ReactJS + NextJS* Feb, 2022
- As a part of learning NextJS, to understand it better I started creating a personal blog website. Where I upload different articles which i like from different places on website. Website has functionality to show featured posts and all-posts. Featured posts are those which are more likely to get visitors attention.
- Tech blogs

Chiragmodi.tech | *Html, Css and JavaScript* Aug. 2021
- any times I learn something new and as part of that I develop a project or something. I wanted to showcase that work. So, I manage this website to upload my work. It has Testimonials, my skill sets and my latest resume to download.
- Chirag Modi

HOBBIES

Event organization
I was part of many clubs and committees during college time. There i used to organize events and manage events.

Travel and video shooting
I like to explore the places and shoot the videos. Sometimes I like to make short videos for my social media.
